Warranty and Disclaimer

To the maximum extent permitted by applicable law, Fujitsu Microelectronics Europe GmbH restricts its warranties and its liability for **all products delivered free of charge** (e.g. software include or header files, application examples, target boards, evaluation boards, engineering samples of IC's etc.), its performance and any consequential damages, on the use of the Product in accordance with (i) the terms of the License Agreement and the Sale and Purchase Agreement under which agreements the Product has been delivered, (ii) the technical descriptions and (iii) all accompanying written materials. In addition, to the maximum extent permitted by applicable law, Fujitsu Microelectronics Europe GmbH disclaims all warranties and liabilities for the performance of the Product and any consequential damages in cases of unauthorised decompiling and/or reverse engineering and/or disassembling. **Note, all these products are intended and must only be used in an evaluation laboratory environment.**

1. Fujitsu Microelectronics Europe GmbH warrants that the Product will perform substantially in accordance with the accompanying written materials for a period of 90 days from the date of receipt by the customer. Concerning the hardware components of the Product, Fujitsu Microelectronics Europe GmbH warrants that the Product will be free from defects in material and workmanship under use and service as specified in the accompanying written materials for a duration of 1 year from the date of receipt by the customer.
2. Should a Product turn out to be defect, Fujitsu Microelectronics Europe GmbH's entire liability and the customer's exclusive remedy shall be, at Fujitsu Microelectronics Europe GmbH's sole discretion, either return of the purchase price and the license fee, or replacement of the Product or parts thereof, if the Product is returned to Fujitsu Microelectronics Europe GmbH in original packing and without further defects resulting from the customer's use or the transport. However, this warranty is excluded if the defect has resulted from an accident not attributable to Fujitsu Microelectronics Europe GmbH, or abuse or misapplication attributable to the customer or any other third party not relating to Fujitsu Microelectronics Europe GmbH.
3. To the maximum extent permitted by applicable law Fujitsu Microelectronics Europe GmbH disclaims all other warranties, whether expressed or implied, in particular, but not limited to, warranties of merchantability and fitness for a particular purpose for which the Product is not designated.
4. To the maximum extent permitted by applicable law, Fujitsu Microelectronics Europe GmbH's and its suppliers' liability is restricted to intention and gross negligence.

NO LIABILITY FOR CONSEQUENTIAL DAMAGES

To the maximum extent permitted by applicable law, in no event shall Fujitsu Microelectronics Europe GmbH and its suppliers be liable for any damages whatsoever (including but without limitation, consequential and/or indirect damages for personal injury, assets of substantial value, loss of profits, interruption of business operation, loss of information, or any other monetary or pecuniary loss) arising from the use of the Product.

Should one of the above stipulations be or become invalid and/or unenforceable, the remaining stipulations shall stay in full effect

1 Introduction

This application note describes the functionality of the Source Clock Timers and gives some examples.

1.1 Key Features

- 3 different timers: Main Clock, Sub Clock and RC Clock Timer
- Interrupt generation in selectable intervals
 - For RC Clock between $2^8/\text{CLKRC}$ and $2^{23}/\text{CLKRC}$
 - For Main Clock between $2^8/\text{CLKMC}$ and $2^{23}/\text{CLKMC}$
 - For Sub Clock between $2^{10}/\text{CLKSC}$ and $2^{17}/\text{CLKSC}$
- All timers can be reset via software

2 The Source Clock Timers

THE BASIC FUNCTIONALITY OF THE SOURCE CLOCK TIMERS

2.1 Source Clock Timers

There are three Clock Timers available:

- Main Clock Timer
- Sub Clock Timer
- RC Clock Timer

With these timers the user can generate cyclic interrupts with an interval specified by a dedicated divider. This can be used to wake-up from a Timer standby-mode periodically. Especially when using a Sub Clock with an oscillation frequency of 32.768 kHz, exactly 1 s intervals (and fractions and multiples thereof) can be implemented easily.

2.2 Registers

2.2.1 Main Clock Timer Control Register (MCTCR)

This register controls Main clock timer's interrupt interval and also its reset function.

Bit No.	Name	Explanation	Initial Value	Value	Operation
15	-	<i>Reserved</i>	X	0	Always write "0" to this Bit
14	MCTIE	Interrupt Enable	0	0	Timer interrupt disabled

* These time intervals are calculated for 4 MHz Main Clock frequency.

2.2.2 Sub Clock Timer Control Register (SCTCR)

This register controls Sub clock timer's interrupt interval and also its reset function.

Bit No.	Name	Explanation	Initial Value	Value	Operation
7	-	<i>Reserved</i>	X	0	Always write "0" to this Bit
6	SCTIE	Interrupt Enable	0	0	Timer interrupt disabled
				1	Timer interrupt enabled

* These time intervals are calculated for 32.768 kHz Sub Clock frequency.

2.2.3 RC Clock Timer Control Register (RCTCR)

This register controls RC clock timer's interrupt interval and also its reset function.

Bit No.	Name	Explanation	Initial Value	Value	Operation
15	-	Reserved	X	0	Always write "0" to this Bit
14	RCTIE	Interrupt Enable	0	0	Timer interrupt disabled

3 Source Clock Timers Example

EXAMPLES FOR THE SOURCE CLOCK TIMERS

3.1 Source Clock Timers Interrupt

Main.c

```

/* THIS SAMPLE CODE IS PROVIDED AS IS AND IS SUBJECT TO ALTERATIONS. FUJITSU */
/* MICROELECTRONICS ACCEPTS NO RESPONSIBILITY OR LIABILITY FOR ANY ERRORS OR */
/* ELIGIBILITY FOR ANY PURPOSES. */
/* (C) Fujitsu Microelectronics Europe GmbH */
/*-----*/

void Init_Port00(void)
{
    PDR00 = 0x00;      /* switch off all port pins */
    DDR00 = 0xFF;     /* set parallel port direction register: output */
}

void Init_MC_Timer(void)
{
    MCTCR = 0x5E;     /* Enable interrupt, interval: approx. 1.049 s */
}

void Init_SC_Timer(void)
{
    SCTCR = 0x56;     /* Enable interrupt, interval: approx. 2 s */
}

void main(void)
{
    InitIrqLevels();
    __set_il(7);      /* allow all levels */
    __EI();           /* globally enable interrupts */

    Init_Port00();
    Init_MC_Timer();
    Init_SC_Timer();

    while(1);        /* wait for interrupts */
}

//-----
__interrupt void ISR_MC_Timer(void)
{
    MCTCR_MCTIF = 0; /* clear interrupt bit */

    PDR00 ^= 0x01;   /* invert Port 00_0 */
}

__interrupt void ISR_SC_Timer(void)
{
    SCTCR_SCTIF = 0; /* clear interrupt bit */

    PDR00 ^= 0x02;   /* invert Port 00_1 */
}

```

The above example demonstrates to configure the Main Clock Timer at an interrupt interval of 1.049 seconds (approximately) and to configure Sub Clock Timer interrupt at an interval of 2 seconds (approximately). In the Main Clock Timer interrupt service routine Port 0 bit 0 is toggled and in the Sub Clock Timer interrupt service routine Port 0 bit 1 is toggled.
